

Codeproof Enterprise Mobile Security

A modern enterprise security and mobility management software that enables businesses to easily secure, deploy and manage mobile applications and corporate data on company-owned and employee-owned (BYOD) mobile devices. **Codeproof** offers an integrated BYOD security and mobile management platform built on top of Amazon's elastic cloud stack for maximum scalability and security. The platform includes **Mobile Device Management, Mobile App Management, Enterprise Appstore, Mobile Kiosk, Data Usage Monitoring, and Geofencing solutions.**

Differentiators

Simple to Use
The cloud dashboard makes it easy to manage a large group of devices.

Fast
Instant policy update from centralized dashboard and quick device enrollment.

Extensive policies
The tab-based policy editor makes it easy to manage hundreds of policies

Data Security
The **Codeproof** platform focuses on data security and data leakage prevention.

Pay per use
Purchase licenses as you grow your business. No upfront commitment required.

Patented Technology
The **Codeproof** mobile security technology is patented in the United States (U.S. Patent No. 9,083,752)

Personal Customer support
Codeproof offers one of the best customer support in the EMM industry according to the CIO Magazine.

Ranked as #1 Android MDM in 2018 by Business.com

Product Offering

Android Enterprise

Android Enterprise, formerly known as Android For Work (AFW), is an advanced EMM framework available on Android marshmallow (6.0+) and above versions of Android devices. The **Codeproof** implementation of Android Enterprise offers the following capabilities:

- Silently deploy and manage apps from Google Playstore including the enterprise Appstore.
- Supports work profile container for managing employee owned BYOD devices.
- Supports Samsung, LG, Motorola, Kyocera, Alcatel, Sony, Lenovo, Nokia, Sonim, and many more device brands.

Apple Business Manager

The **Codeproof** platform fully supports Apple device enrollment program and apps deployment using the latest Apple Business Manager (formerly known as DEP & VPP).

BYOD and Workspace Container

The **Codeproof** platform supports work space container and work profile management for employee owned devices.

Kiosk Mode

The **Codeproof Kiosk** mode allows admins to block unwanted apps on employee devices. As a result, end-users can only launch the admin-allowed apps from the custom home screen Kiosk mode. The feature also allows admins to set the custom background logo and branding information remotely from the **Codeproof dashboard**.

Application Whitelisting and Blacklisting

Enable or disable only a specific set of apps installed on the device.

Secure Browser

The Secure Browser app limits Web browsing to websites allowed by admins from the cloud dashboard. Admins can block websites based on URL or keywords. Secure Browser also blocks advertisement and malicious websites. All the browser features are remotely managed from the **Codeproof dashboard** for the entire group of enrolled devices.

Usage and Expense Management

The **Codeproof platform** offers data and call usage analytics capabilities, including monitoring and restricting data usage on multiple devices.

Location Tracking and Geofencing

Remotely monitor the physical location of devices and get notified when the device enters/exits specified geographical regions.

Configure WiFi, Email and VPN

Remotely configure WiFi, Email, and VPN settings on the device.

Password Policy and Encryption

Enable strong passcode policies and storage encryption on the device.

Reporting

Codeproof platform offers various apps and device inventory reports.
