ISO/IEC 27001 — Endpoint Checklist

Checklist

- Asset inventory and ownership for devices and apps.

- Access control with least privilege and MFA via identity provider.

- Cryptography and key management on devices and apps.

- Operations security including patch and update posture.

- Communications security with Wi-Fi, VPN and certificate trust stores.

- Supplier management for third-party apps on devices.

- Incident management with remote lock and wipe procedures.

- Compliance monitoring with audit and evidence retention.

How Codeproof helps

- Device inventory, groups and tags to organize assets.

- Policy enforcement and SSO/MFA integrations.

- Certificate deployment and per-app VPN configurations.

- Patch posture tracking and update controls where supported.

- Activity logs and exportable reports for audits.
